

The DisplayWork kiosks range is designed to provide a means of interactive graphical and video interface in any multiuser or public access environment. You can walk up to this system and easily access a host of information ie websites, customer service program or any multimedia presentation, all on your finger tips. All this can be achieved in using a futuristic, yet reliable and robust casing in order to withstand the rigors of public use.

The DisplayWork kiosks unite a high resolution, crystal clear TFT LCD and industrial quality touchscreen and up to Pentium4 processor. All designs are modular, allowing customisation and various combinations of sub assemblies, ie without the stand to be set on a counter top, mounted on a wall or even hung from a ceiling.
